

Sciensus Decentralised Clinical Trials.

Introduction to Sciensus.

At Sciensus, we're proud to be a leading healthcare provider. For 30 years, we've worked in partnership with the NHS, private medical providers and pharmaceutical companies to bring patients the life-changing treatment they need, in the comfort and convenience of their own homes. Today we're a 1,700-strong team, delivering complex clinical care and medication services to over 200,000 diverse patients across the UK and Europe. Together, we're dedicated to helping each and every patient make the most of their medicine, wherever they are. So, using unparalleled insights, cutting-edge research and intuitive technology, we connect with people powerfully and personally, focusing on their unique needs, empowering them to achieve their goals, and supporting them every step of the way.

Sciensus Decentralised Clinical Trials.

Our proposition of Decentralised Clinical Trials is in the form of nursing and pharmacy services. Our nursing can be delivered in person or remote including IMP or placebo administration, patient observation and insight studies.

Our pharmacy dispense and distribute IMP to Clinical Trial Protocols then deliver to patients using our temperature controlled GDP distribution fleet.

We have full regulatory compliance. All Sciensus colleagues involved in clinical trials have received GCP and trial specific training.

Across our business, we currently have over 225,000 patients and we have completed over 50 clinical trials utilising our UK wide footprint, including relationships with all NHS Hospitals, thousands of consultants and many Pharmaceutical companies.

The benefits of working with Sciensus for your Decentralised Clinical Trials.

Our proposition brings patients onto clinical trials quickly, accelerating the study by patients not having to regularly attend hospitals/clinics for IMP or observations.

Similarly, our nursing and pharmacy capacity provides solutions where other providers, including the NHS have challenges.

We also break down geographical constraints such as consultants who can access more patients across UK. As an example we have patients living in Scotland who are under the care of consultants practising in London. Our experience and digital solutions then support patient adherence to clinical trial protocols, maximising output.
